When you start the program, if you haven't registered our product, you will be informed to purchase the full version.

Then you will be presented with the primary screen.

## Add documents

Click the  **Add File** icon in toolbar will open the standard file browse and select window, where you can browse the folders and find the PDF file you want to mail. Alternatively you can open the "**File**" menu and select "Add PDF Document" to add PDF file.

If you are using Windows Explorer to locate files, you have the convenience of being able to **drag and**

**drop** files into the document window to add PDF file.

Easy PDF Rename even allows you to select all files in a particular directory/folder by either using the **Add a Directory** option from the File menu or click the  **Add Folder** icon! Add a directory also supports sub-folders.

## Rename method

There are two methods you can select to rename: simple and advanced

### Simple

Simple Advanced

**Rename Filename:** %Title% Macro ?

**Modify Metadata**

New Title: 123 Macro

New Author: %author% Macro

New Subject: %subject% Macro

New Keywords: %keywords% Macro

New Creator: %creator% Macro

New Producer: %producer% Macro

You can choose how the original files will be named by choosing filename pattern, The "Filename pattern" dropdown lets you choose from several "patterns" of nomenclature so that each of the original files is logically renamed and can be easily identified later, These name patterns are macros that automatically increment as necessary for the Final renamed files.

For example, choosing the {filename}-{author} macro will rename your original PDF files from the un-renamed filename and add author within the for each original PDF file. An example of this pattern and macro could rename files like **Example\_Mike\_How To Cook Eggs .pdf**, Choosing {filename}\_{author}\_{Title} will rename files which include the filename, author and title of the original un-rename PDF file that each original file contains.

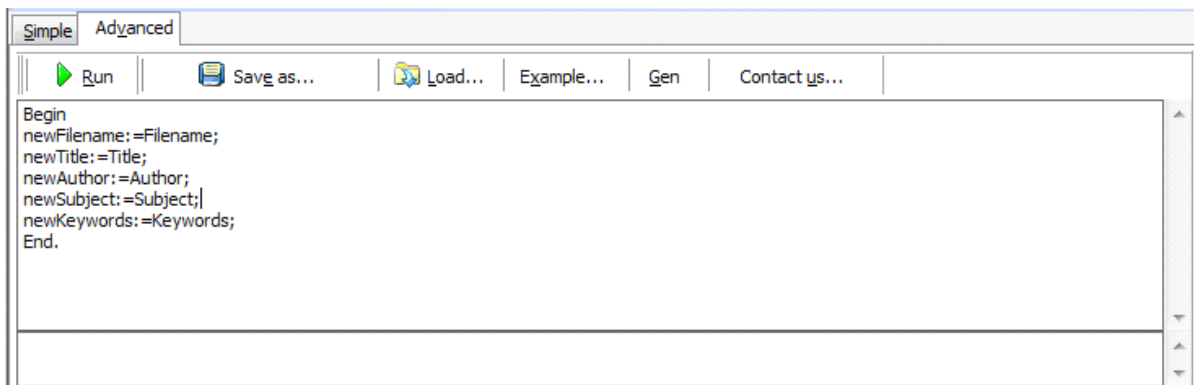

For even more flexibility, you can enter your own macro selection to give renamed files any rational name you want.

### Macro List

MACRO	DESCRIPTION
<b>{Filename}</b>	The un-rename\original file name without extension name.
<b>{Filesize}</b>	The un-rename\original file size For example: 256000 (note: size=256K).
<b>{Date}</b>	The un-rename\original file modify date, For example: 02-04-2009, the format can be defined from <b>Marco-&gt;Date time format</b> menu
<b>{Time}</b>	The un-rename\original file modify Time, For example: 12-56, the format can be defined from <b>Marco-&gt;Date time format</b> menu

## Advanced

Easy PDF Rename allows you to custom how the output files will be renamed by using Script. To enable script function, you need to select the 'Advanced' option, then a script editor will be displayed, which you can add script to change 5 variables (Filename, Title, Author, Subject, Keywords).

The script is based on Object Pascal, more about Object Pascal syntax please visit:

[http://en.wikipedia.org/wiki/Object\\_Pascal](http://en.wikipedia.org/wiki/Object_Pascal)

A script for variable 'Basename' example here

```
// example #1 - Trim Basename
// Script code:
begin
  newFilename:=trim(Filename);
end;
// example #1 end;
```
